

### Abstract

5 A method of facilitating replacement of a supply of air  
freshener every time a supply of soap is replaced, including  
the steps of providing a supply of air freshener, providing  
a supply of soap and joining the supply of soap and the  
supply of air freshener. Another aspect of the invention is  
a method of packaging a supply unit including providing a  
supply of soap and a supply of air freshener and connecting  
the supply of soap and the supply of air freshener in a  
10 manner such that when the supply of soap is removed from a  
dispenser, the supply of air freshener is removed from the  
dispenser as well. Another aspect is a supply unit for the  
dual dispenser including a receptacle, a supply of soap  
within the receptacle, and a supply of air freshener  
15 connected to or secured within the receptacle. Yet another  
aspect of the invention is a dual dispenser including means  
for dispensing the soap, means for actuating the dispensement  
of soap, means for accelerating the dispensement of air  
freshener and means for actuating the means for accelerating  
20 the dispensement of air freshener.
